## Clean Energy Projects for Industrial Markets

At Performance Mechanical Inc. (PMI), we construct, install, maintain and repair a wide range of clean energy projects. Our mechanical and process piping experts have experience working in virtually all aspects of renewable energy projects, including biomass and carbon capture.

PMI is your single-source solution for your green project challenges. We offer services in the following areas:

- **Biofuels**—Manufacturing of low-carbon intensity fuels, such as ethanol and renewable diesel, requires unique process piping solutions. We can help you design, build, and maintain the processes you need to keep your facility running smoothly.
- **Carbon capture**—CO<sub>2</sub> must move through a complex infrastructure of pipes, valves, and vessels before it is reprocessed or sequestered. PMI's process piping experts deliver best-in-class service to make these complex, challenging projects a reality.
- **Biogas**—We have extensive experience when it comes to installing the anaerobic digestion systems needed for biomass facilities. We've helped the second largest landfill-gas-to-energy facility in the country with their biomass projects.
- **Hydrogen**—PMI has the know-how to fabricate, install, and maintain the sophisticated systems needed to keep your hydrogen fuel production facility up and running.
- **Biomass**—Our mechanical professionals understand the intricate boiler, compressor, piping, and instrumentation systems critical to the operation of this sustainably produced energy.
