Performance Mechanical Inc. (PMI) offers pressure vessel services from a team of certified boilermakers and quality control professionals. We have performed over 200 R Stamp projects in the last three years—so you can be confident that you're in experienced, highly capable hands.

The Certified Expertise You Need

Any work performed on a pressure vessel must be completed according to stringent regulatory standards. As a valid National Board Inspection Code (NBIC) certificate holder, PMI can help you navigate the processes and paperwork necessary when repairing, re-rating, or altering a pressure-containing part.

We have experience dealing with both the NBIC and State of California Authorized Inspectors and can help you with U-1A data reports, R-1 or R-2 forms, and site assessments.

Our team is ready to perform work in compliance with the latest regulations, including all applicable provisions of the NBIC, as well as the proper section and edition of the American Society of Mechanical Engineers (ASME) Boiler and Pressure Vessel Code (BPVC).

California's Trusted Industry Leader

When it comes to welding pressure retaining items, you need specialists who have demonstrated their quality through rigorous testing.

PMI's boilermakers are certified to perform R stamp re-rates, repairs, and alterations as specified by the National Board of Boiler and Pressure Vessel Inspectors and ASME.

We offer services across the entire state of California and have a hard-earned reputation throughout the region for the quality of our work and the effectiveness of our team.
